Confused about painkillers ^[2]

Dear Alice,

Why do many doctors and nurses say aspirin is bad for you? They say to take Advil or some other pain killer instead.

OxyContin: What do you know? ^[3]

Dear Alice,

I was poking around your website because of simple curiosity, and I found that you have very little or no information about OxyContin, its availability, its effects or its dosages. Like, how much would it take to kill a person? -and- What is it, how is it recreational, and what are its origins? Just out of curiosity.

Thanks,

The Cat.

Using stimulant drugs to study ^[4]

1) Dear Alice,

I have a large amount of course work, which is combined with a job and extra-curriculars, and while I want to succeed in all of them, I find that I simply don't have enough time, even though I currently sleep only 4 or 5 hours a night. I mentioned this to a group of my friends here at school, and it turns out they all take stimulants to help them manage jam-packed undergraduate life. The pills are called ADDERALL and PROVIGIL. I have acquired some for myself, but before I take them, could you tell me if either has serious health risks? I do not have any other health problems or take any other medications. A few of my friends tell me that they sometimes stay awake for as long as 3 or 4 days. If it is reasonably safe, that would be great! Thank you.

Sincerely,
No time for sleep

2) Dear Alice,

Given the fact that this is a top-notch school, it's total hoo-ha that you haven't included any info on all the non-hard core, but still illegal, "study stimulants." Is all this ADDERALL gonna do me permanent damage or what?

awaiting your response,
awake

Short- and long-term effects of misusing antihistamines ^[5]

Dear Alice,

I've experimented with the abuse of Benadryl on a few occasions now and have been absolutely blown off to another world, I was just curious as to what the side affects, long or short-term, can look like, and what the dangers are of abusing this drug (acetaminophen free).

Thanks,

Trippy

Snorting Adderall and Ritalin ^[6]

Dear Alice,

Recently I have started snorting Ritalin and Adderall (not at the same time though). I have found

that the effects closely resemble that of snorting cocaine, but are not quite as intense. I really like doing this, because it's much cheaper than buying coke. However, I was wondering exactly how dangerous this might be, if even at all, considering it's a prescribed drug and I never snort more than the average dose that you would take orally. If you could tell me what the danger in doing this is and what I might possibly be doing to my body, that would be great.

Thanks,
Adderall Addict
